**10 HIGH QUALITY
CHATGPT PROMPTS TO
DO YOUR RESEARCH IN
MINUTES**

I love doing research with the help of LLM Models. It saves me so much time.

And when it comes to ChatGPT, you can get everything as you want.

However, a common challenge is knowing how to craft an effective prompt.

Hey guys this is Kanika, your Passive Income Coach and in today's article I am going to teach you about how you can research about any topic, with ChaGPT.

I had a simple plan for this article when I started. I wanted to walk you through how to research any topic step-by-step. Let's say you want to learn about AI — where do you start? What questions should you ask first, and what comes next?

I'll share a template you can use to get the ball rolling. Then I'll break it down and explain why each part matters. Also I will try to make more pointers, because I feel pointers are easy to remember.

By the end, you'll have a good grip on how to dig into any subject, not just how to ask the right questions. It's about learning to learn, you know?

Ok, so without any further delay let's get started!

Step 1: Define the Topic and Scope

Defining your topic is like setting the foundation for a building.

It helps you know exactly what you're going to explore, giving you a clear direction.

Without this step, your research could become scattered, making it harder to draw meaningful conclusions.

When you clearly define your topic and scope, it becomes easier to explain your research to others.

Whether you're writing a paper, giving a presentation, or discussing your work, people will understand exactly what you're exploring and why it's important.

- **Mathematical Foundations (19th-20th Century):** The formal foundation for AI began with the work of logicians and mathematicians. In the 19th century, George Boole developed Boolean algebra, which became a fundamental tool for computer science.
